

METRISURE

Digital Test Report Generation System for Non-Automatic Weighing Instruments (NAWI)

PROBLEM STATEMENT ALIGNMENT

Ministry of Consumer Affairs, Food & Public Distribution

Department of Consumer Affairs — Legal Metrology Division

An enterprise-grade, deterministic digital platform engineered to eliminate manual paper and spreadsheet errors in legal metrology testing, dynamically enforce OIML R-76 Maximum Permissible Error (MPE) envelopes, and generate cryptographically verifiable Digital Test Reports.

QUICK VERIFICATION METADATA

Standard: OIML R-76-1 (Edition 2006)

Classes Evaluated: Class I, II, III, IIII

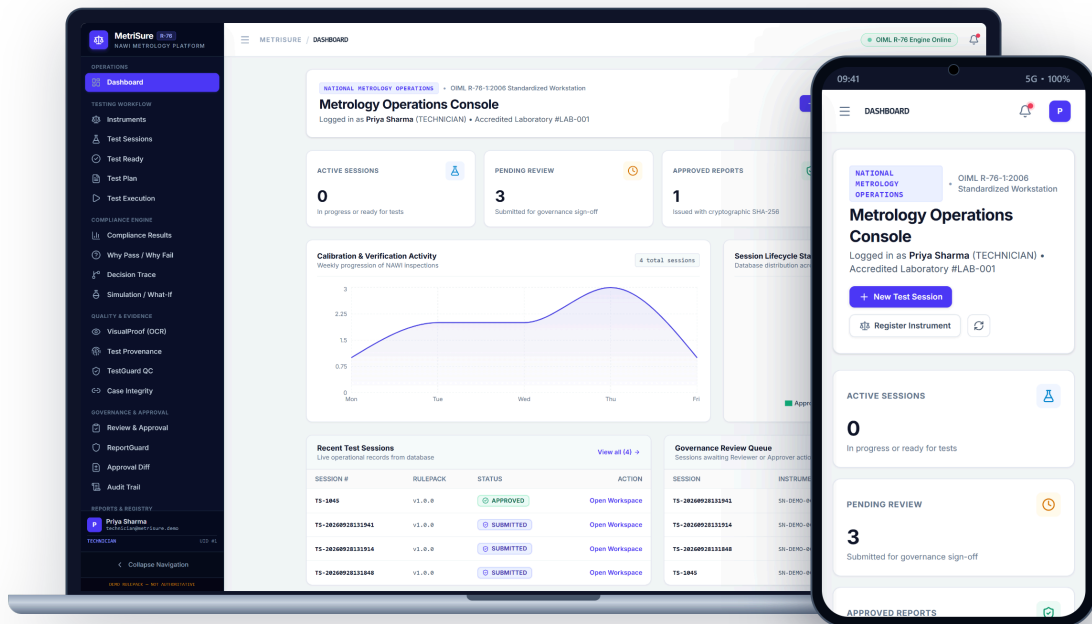

Demo Reference: Class IIII DT-3000 (30 kg)

Engine Paradigm: Pure Deterministic Python Engine

Report Format: Sealed Digital PDF + SHA-256 Digest

Actual Application Interface — Desktop & Responsive Mobile

REAL SCREEN CAPTURES

The MetriSure responsive web interface operates seamlessly across high-resolution laboratory workstations, tablet inspection benches, and mobile devices without requiring third-party native installations.

Deterministic MPE

Exact OIML R-76 mathematical formulas calculate step-by-step error bounds without human error.

DecisionTrace

Every pass or fail verdict provides clear mathematical proof and rule references for full transparency.

Evidence Binding

Observations are cryptographically bound with raw measurements, timestamps, and optical images.

4-Eye Governance

Segregation of duties across Technician, Reviewer, Approver, and Administrator roles.
